Descriptors-*Agricultural Education, *Directories, *Educational Programs, *Enrollment Trends, National Surveys, Natural Resources, Post Secondary Education, *Technical Education

Two-year technical education curriculums in agriculture and natural resources are identified and organized as a directory in this publication. To qualify, a curriculum must prepare for occupational entry into a technical or semi-professional field, prepare for a cluster of closely related occupations rather than for a single job, and be in a common area associated with agriculture. Schools are classified by state. Information listed includes the name of the chief agricultural administrator, curriculums offered, and student enrollment for 1966 through 1968. At the end of the period the statistical summary revealed a 32 percent increase in the number of institutions offering programs, 27 percent increase in number of programs offered, and 32 percent increase in number of students enrolled. The 1967-68 summary listed 181 institutions offering 462 programs for 13,665 students. (DM)

FOREWORD

This study and resulting directory and statistical summary was conducted upon the initiative of the author and the encouragement given by the Panel on Two-Year Programs (of which the author is one of eight members) of the Commission on Education in Agriculture and Natural Resources of the Division of Biology and Agriculture of the National Research Council of the National Academy of Sciences-National Academy of Engineering during June, 1967 to June, 1968.

Although the author believes the information given herein to be reasonably accurate and complete, no guarantee of such is stated or implied.

The author expresses appreciation to the numerous people who assisted him by reporting for their state, government, commonwealth, or institution. As the first such known attempt to identify and compile as a directory all two-year technical education curriculums in agriculture and natural resources in the United States of America, he solicits suggestions for improvement and better usefulness of and, of course, more accurate and complete information.

For purposes of this study, a two-year technical education curriculum in agriculture and natural resources is defined as any curriculum which ordinarily requires approximately 64 semester hours (4 semesters of approximately 16 weeks each) or 96 quarter hours (6 quarters of approximately 11 weeks each)--or the equivalent--for completion; the primary purpose of the curriculum is to prepare for occupational entry into a technical or semiprofessional field rather than for transfer credit toward a baccalaureate degree in a four-year college or university; the curriculum prepares for a cluster of closely related occupations located between the professional and trade levels--not for just a single job or one that mainly involves the use of learned skills (a trade); and the technical occupational field is in an area commonly associated with agriculture--including horticulture and forestry.
